Changing the landscape of community mental health care

This five-day Summer School is dedicated to cultivating champions in community mental health care through exchange of best practices and learning from practitioners, researchers and service managers!

The ultimate goal is to improve knowledge and skills required for the implementation of good community based mental health care and creating an enabling environment for the recovery of people with severe mental illness.

Programme highlights
Shadow sessions within services
You will join professionals on a regular working day, one on one. There are several possibilities to choose from such as a meet-up with peer specialist, working with a F-ACT-team or learning about research.

Other programme highlights are interactive lectures, practice-based workshops, peer-to-peer exchanges and TEDx sessions.

Keynote speaker
Prof. Phillippe Delespaul
European Assertive Outreach Foundation; Flexible Assertive Community Treatment the Netherlands

“Integrated care in the neighborhood improves resilience and reduces stigma”

Key goals and objectives
After five days of training you will:
• Have an in-depth understanding of the principles of recovery within community mental health care.
• Have a practical understanding of the roles and responsibilities of different professions within a community mental health team.
• Understand collaborative ways of working and outreach approaches with service users and their carers, including service users as providers of care (peer workers).
